ABSTRACTED-PUB-NO: US 6049755A

BASIC-ABSTRACT:

NOVELTY - The previous cross-street (64) and the next cross-street of the location street of the vehicle are displayed, where the previous and next cross-streets have a rank greater than the threshold rank when the rank of the location street is greater than the threshold rank. The display cross-streets between the next cross-street and previous cross-street that have rank equal to or less than the threshold rank are excluded from the display.

DETAILED DESCRIPTION - The <u>database</u> of road segments is created where each road segment has a predefined rank. The current vehicle location relative to the <u>database</u> of roads is determined and the determined location is displayed on the display. The location street is displayed based on the current vehicle location. The cross-street and next cross-street of the location street are displayed in a predefined manner. The previous and next cross-streets having any rank are displayed when the rank of the location street is equal to or less than the threshold rank.

An INDEPENDENT CLAIM is also included for vehicle location display of the navigation system.

USE - For displaying current vehicle location using vehicle mounted <u>GPS</u> based navigation system, either in graphical display mode or textual display mode.

ADVANTAGE - Facilitates provision of vehicle <u>location</u> display that automatically reduces the complexity of the displayed <u>map</u>, <u>by filtering</u> out the display cross-streets having a rank equal to or lower than the threshold rank and that are located between next and previous cross-streets, and shows the current vehicle <u>location</u> and that permits the user to access stored textual information rapidly using a minimum number of key strokes.

DESCRIPTION OF DRAWING(S) - The figure shows the screen display of a vehicle location display device. \cdot

Previous cross-street 64
